## **Are You At A Healthy Weight?**

Reaching and maintaining a healthy weight is good for your overall health. This will help you prevent and control many chronic or diet-related diseases and conditions.

Follow these steps to know if you are at a healthy weight.

1

Calculate Your BMI Weigh yourself and figure out your body mass index (BMI\*). BMI shows if your weight is in the healthy range for people of your height. Calculate it at http://nhlbisupport.com/bmi/bminojs.htm by following these steps:

- Type your height and weight into the boxes and click "Submit." Your calculated BMI will appear on the right side of the screen.
- Compare your BMI with these:

Healthy weight = 18.5 - 24.9 Overweight = 25 - 29.9 Obese = 30 or greater \*While BMI is valid for most men and women, it does have some limitations. For more information, see http://www.nhlbi.nih.gov/health/ public/heart/obesity/aim\_hwt.pdf/.

You can also calculate your BMI using the chart below. Mark the square where your height and weight cross. The column where they cross will show you if you are at a healthy weight, overweight, or obese.
